PERFO

The No. 1 Solution!

Ideal for providing a firm surface on grass runways, taxiways, helipads and parking areas

- durable, all weather surface prevents rutting
- increased flying season and revenue
- safer, more secure take-off and landing surface
- secure interlocking tiles prevent standing edges
- tiles do not rot, UV and frost resistant
- 75% closed surface distributes load & reduces mud build-up
- grass grows back through the tiles within weeks, preserving the character of grass airstrips
- tiles allow water to pass through them. Natural drainage maintained. High surface contact area & load distribution
- planning permission not usually required
- self-anchoring – no additional materials or fixing required
- airfield's own labour force can install the system in a short time
- tiled matting can often be installed into an unprepared soft grass surface using a vibrating roller or compacter plate
- tiles can be removed later, if required
- low cost when compared to alternative surfacing options
- marker tiles for centreline, thresholds and boundaries

Easy to install in 3 simple steps

Transforms soft ground into a stable base

Grass grows back through the tiles
